

San Diego Retina Associates physicians are aware of the ongoing Good Days program which is a national non-profit charitable organization that assists patients who have Medicare and Medicare Advantage plans to offset the cost of the coinsurance which is 20% responsibility for injections.

Unfortunately, the program has not received adequate funding for 2025 to continue assisting existing patients or new patients.

As a result, until Good Days receives more funding, patients will be responsible for their coinsurance (20%) amount at the time of their visit. If this is not possible for you, please do not skip your scheduled appointment, there may be other treatment options available. We are closely monitoring the situation and will provide updates as more information becomes available.
